## What is Web Communication (WebRTC)?

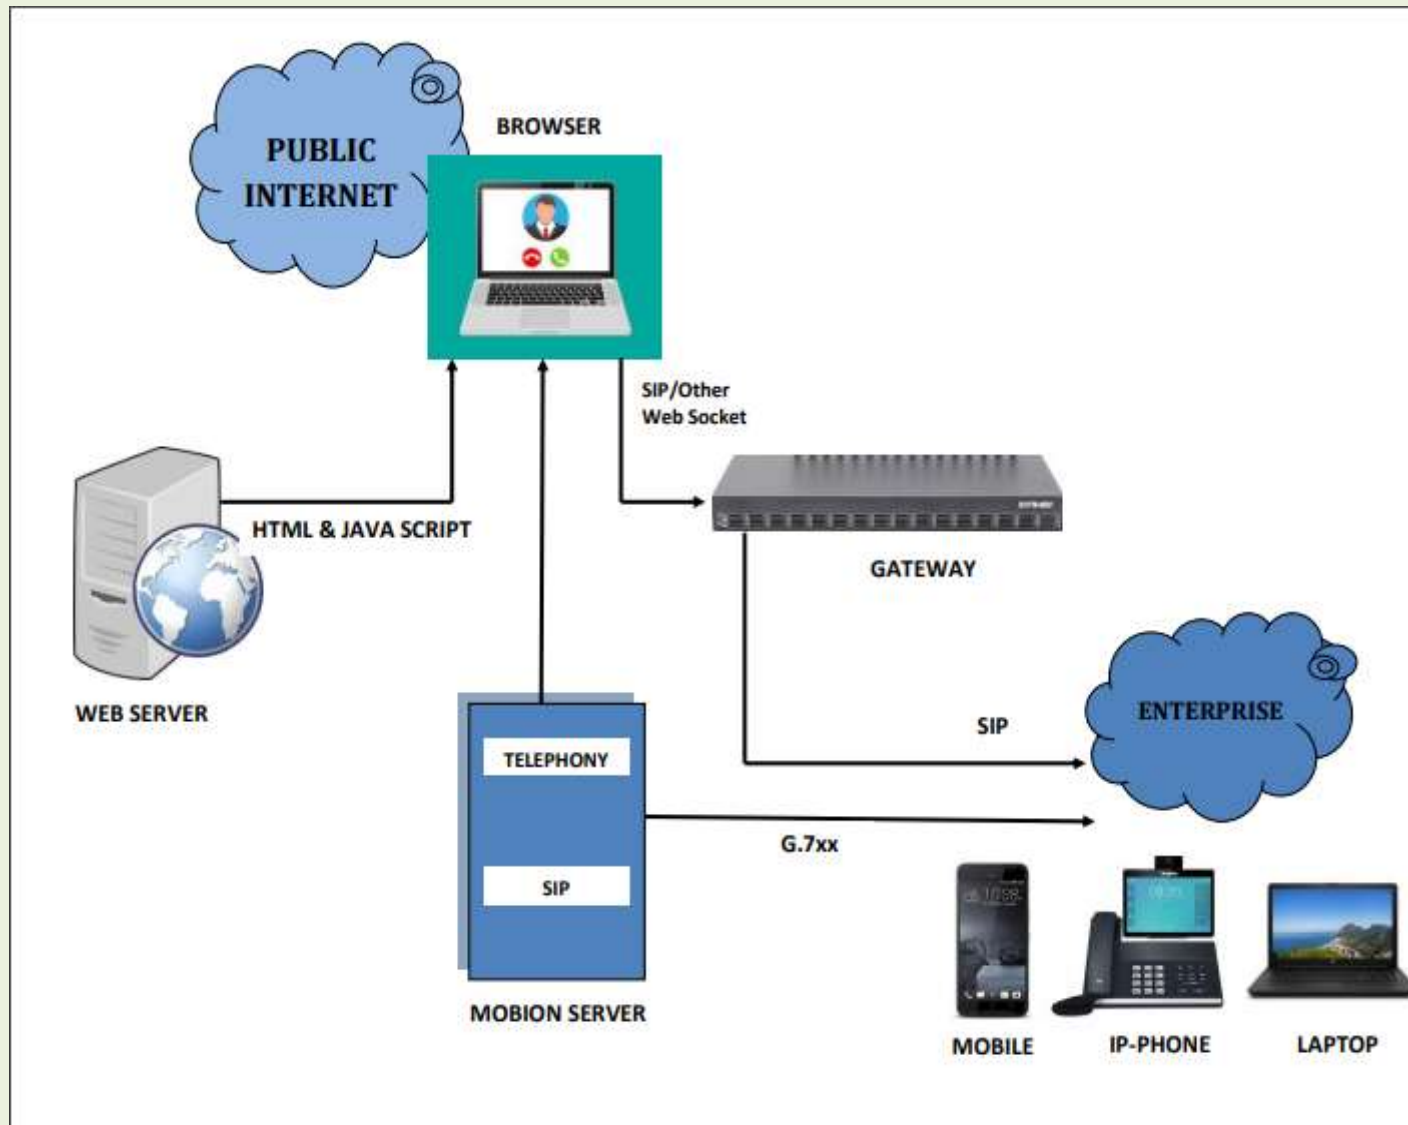

---

- WebRTC's mission is to enable rich, high quality RTC applications to be developed for the browser, mobile platforms, and IoT devices, and allow them all to communicate via a common set of protocols.
- It enables peer to peer video, audio, and data communication between two web browsers, mobile , IP Phone .
- This allows for video calling, video chat, and peer to peer file sharing entirely in the web browser, with no plug-in.

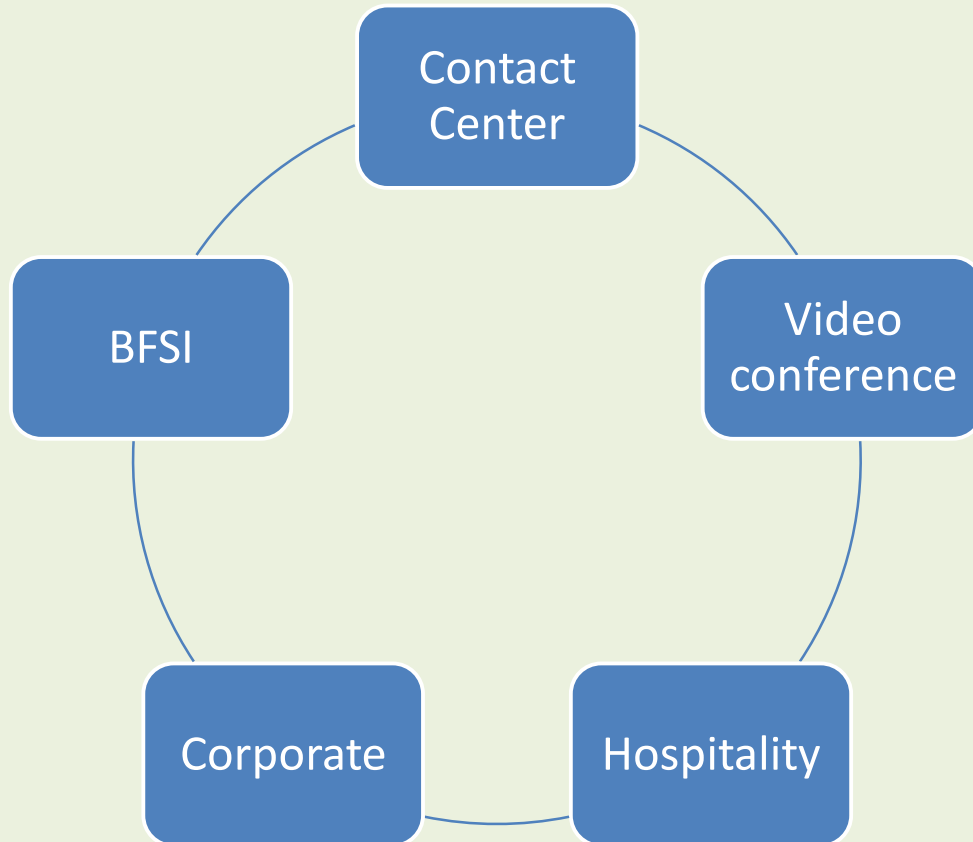

BTT has launched **MobiWeb** – a WebRTC application suite

# BTT Solution - MobiWeb

## Features & Benefits of MobiWeb

---

- Audio and Video Call
- Conference call
- Video conferencing
- Conferencing bridge - Supports schedule and Meet me mode.
- Instant messaging and Online Chat
- File sharing
- Presence management location information
- PBX integration to access extension
- Supports IP Phone
- Data/ Voice encryption
- Real time encryption using SRTP

## Special Features

---

- Audio and Video communication inside web pages by allowing direct peer-to-peer communication.
- High-quality applications meant for the browser , mobile platforms and IOT devices and allow them all to communicate via a common set of protocols.
- WebRTC enables any Web server to deliver a unique real-time communications experience, with simplicity and reliability, without dependence on service providers.
- Web site is connected with your office with RTC.
- Simple and reliable.
- Platform and device independent.
- WebRTC enables users to participate in a communication experience as delivered by any website without downloads, registration or general cost.
- WebRTC is extremely cost efficient compared to other options.
